

**ABSTRACT OF THE DISCLOSURE**

A method and apparatus for making a shaped-spring assembly. The method and apparatus utilizes a multifunctional tool or apparatus which permits the forming, storing and loading of shaped springs into a shaped spring  
5 cavity so as to form a shaped-spring assembly. The tool of the present invention permits the formation and storage of the shaped springs without fatiguing the spring, and also permits the loading of the shaped spring into a shaped-spring cavity in a manner that does not result in too large or too low of spring force for the shaped spring assembly.
